                                                                                             9
The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                            AGCTCTATTAATTCAAGAGGAGCAGCAAATAAAGCAAAAACTCAAAACCTAAGTTTTCTGA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   3352
                                                                                                                                                                                                                    ö
                          ä
which is responsible for many red and blue colours in plants. The polynucleotide is useful for modifying e.g. leaf colour, flower colour fruit colour in plants. The present sequence represents the plasmid pAG3202 which is used in an example from the present invention for the generation of plants with an ANTI phenotype by transformation with an activation tagging construct
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              TCTTTTTCCACGATGTTCCTCGTGGGGTGGGGTCCATCTTTGGGACCACTGTCGGTAGAG

                                                                                       7316
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The invention comprises a plant gene activation vector that contains a hairy-root induction gene and enhancer and/or promoter which can function in a plant. The vector of the invention is useful for analyzing a plant gene. The present DNA sequence is claimed in the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      gene activation vector-related DNA sequence pHR-AT-GFP - SEQ ID 14.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Novel plant gene active vector comprising hairy-root induction gene, and enhancer and/or promoter that functions in plant, useful for activating plant gene forming hairy root.
                                                                                                                                                                                                                                                                                                      TTTTCCACGATGTTCCTCGTGGGTGGGGTCCATCTTTGGGACCACTGTCGGTAGAGGCA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present sequence is that of a 4x cauliflower mosaic virus (CaMV) 35S chlancer sequence preferred for use in the method of the invention. It includes 4 repeats of 202 bp AluI-EcoRV fragments of the 35S enhancer, 2129 bp of the CaMV sequence associated with each tandem Alu-EcoRV repeat, and an additional 7 bp repeated sequence, which does not appear in the 35S enhancer region of the native CaMV genome. This 4X CaMV 35S enhancer can be used in a method for identifying genes associated with a cleament can be used in a method for identifying genes associated with a cleament can be used in a method for identifying genes associated with a cleament can be used in a method for identifying genes iransforming plant enhance gene expression and has the ability to integrate into the plant genes, selecting transformed plant cells with an activation and has the ability to integrate into the plant genes, selecting transformed plant cells, regenerating catesion of casired trait, identifying, isolating and characterizing genes the cransformed plant cells to yield mature plants, selecting plants having a desired trait may be increased resistance to the desired trait.

The desired trait may be increased resistance to the desired trait. The method is modified leaf number, leaf pigmentation and shape, modified leaf number, leaf pigmentation and shape, modified leaf number, solver number, con the plants having short life cycles are transformed, as cort are and shape, modified seen nordes, root mass or root covered by any ariseties or increased drought, salt and antibiotic commulified by any ariseties or increased drought, salt and antibiotic commulified by any ariseties or increased drought, salt and antibiotic commulified by any ariseties or increased drought, salt and antibiotic commulified by any ariseties or increased transformed, as

                                                                                                             41
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Bize
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            New transgenic plant cell, useful in producing plants with altered size and stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          5117 TAAGTACTCAGCACTACTTCTTTGATGATTCTTTTGTTGGTGGGGGGTGTACATTGGTG

```
New transgenic plant cell, useful in producing plants with altered size and stature and with normal and healthy root growth.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                   781 AATTITCTCTTIGGTTAGATTTTTACACCGCCATGGAATTATCACTTCAAAAAATAAAAAA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               99
                                                                                                                                                                                                                                                                                                                                                                                                                                                                       9
                                                                                                                       size
                                                                                                                                                                                                     The invention relates to a transgenic plant transformed by a Dof transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and polypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   360
The invention relates to a number of isolated Arabidopsis thaliana CDNA sequences and their encoded proteins which are especially transcription factor related CDNA's and proteins. The isolated or recombinant plant transcription factor polymuclectides and polypeptides are useful in producing transgenic plants with commercially valuable properties, i.e. modified or altered desirable traits as compared to a reference plant, such as an alteration in a plant growth characteristic, e.g. growth rate, germination rate of seeds, vigor of plants and seedlings, or leaf and flower sensecence. Sequence information related to the polymucleotides and polypeptides can also be used in bioinformatic search methods. The transgenic plant is useful for growing a progeny plant from a parent plant. This sequence represents one of the CDNAs of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   9

The invention describes a transgenic plant comprising a recombinant polynucleotide of any one of more than 500 nucleotide sequences fully defined in the specification or its complement. The method of the defined in the specification or its complement. The method of the chanced to be used to produced a plant having altered traits such as: enhanced tolerance to abiotic stress; glyphosphate tolerance; hormone sensitivity; disease resistance; sugar sensing; early or late flowering; altered flower structure, change in stem bifurcations, altered branching pattern, reduced apical dominance, reduced trichome density; lack of trichomes; reduced ectopic trichome development; altered trichome trichomes; reduced ectopic trichome number; altered stem morphology; increased root growth; increased root hairs; altered seed development; altered cell proliferation or cell differentiation; rapid development; altered cell proliferation or cell differentiation; rapid development; contenses in root anthocyanins; increase in plant size; leaf morphology; seed biochemistry; increase in root anthocyanins; increase in plant size; decreased plant size; leaf morphology; seed conforming or alteration in light response or shade avoidance. The transgenic plant, polynucleotides and polypeptides are useful in bioinformatic search methods. This sequence represents a plant transgenic place are deful in bioinformatic search methods. This sequence represents a plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            4351
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       4411

                                                                                                                                                                                                                                                                            9
transcription factor, OBF (ocs binding factor) binding protein (OBP3). OBP3 is also known as SOB1. The transgenic plant cell and OBP3 nucleic acid and pollypeptides are useful in producing transgenic plants with altered size and stature and with normal and healthy root growth. The present sequence is Arabidopsis thaliana OBP3 antisense DNA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              AACGAGGAATACACATCATGGGGGGGTAACAGTTCTTGGACCGGTTTCACCTCCAACAAC

Production method of a large amount of biologically active interleukin-12 protein using plant cell suspension culture cheaply and safely.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    A production method of biologically active interleukin-12 protein using plant cell suspension culture is provided, thereby cheaply and safely producing a large quantity of biologically active interleukin-12 protein. The production method of biologically active interleukin-12 protein comprises the steps of: (a) providing a transgenic plant having a gene encoding p35 subunit of interleukin-12(11-12) and a transgenic plant having a gene encoding p40 subunit of interleukin-12(11-12), (b) crossbroted in p35 containing transgenic plant with the p40 containing transgenic plant expressing both p35 and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         interleukin-12; transgenic plant; Nicotiana tabacum; T-DNA; pMYL28; ds.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                     503 ATAGCCCTTTGGTCTTCTGAGACTGTATCTTTGATATTCTTGGAGTAGACGAGAGTGTCG

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       ઠે
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           This sequence shows the nucleotide sequence for the plasmid designated pPHI1406. The plasmid vector contains the gene for MCDV (maize chlorotic dwarf virus) coat protein 3 placed under control of trandem cauliflower modaic virus 35S promoters isolated from the 1841 strain of the virus, and a polyA signal sequence obtained from the potato proteinase inhibitor I ( Pin II) gene that exhibits enhancer-like activity. The chimeric gene also includes a 79 bp sequence omega' from the 5' leader region of tobacco mosaic virus that functions as a translational enhancer; and a zea mays alcohol dehydrogenase 1, intron 1 fragment spanning nucleotides 119-67, trimmed to 557 bp with Bal 31 nuclease, which has been shown to function as an enhancer of gene expression in monocots. The DNA is used for imparting resistance to MCDV or viruses to which MCDV infection or resistance provides cross-resistance, including maize dwarf mosaic virus strain A Any or all of the three coat protein genes from MCDV can be used to provide protection for plants. MCDV has a single, long RNA core which is shown in AAQ74694. (Updated on 25-MAR-2003 to correct PN field.)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 6927
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   6987

p40; (c) isolating calluses of the transgenic plant of step (b) to produce a plant cell line(KCTC 1021BP); and (d) suspension culturing the plant cell line(KCTC 1021BP) to express the biologically active interleukin-12, wherein the plant is Nicotiana tabacum; gelatin may be further added into the medium in step (d) for improving production of IL-12; and the IL-12 contains a signal peptide. The present sequence represents T-DNA region of pWYLZ8.

November 2005

Published Applications Nucleic Acid and Published Applications Amino Acid database searches now generate two sets of results each. The Published Applications databases have been split into two parts to reduce the amount of time required for their daily updates. This results in more machine time being available for processing searches.

Newly published applications will appear in the Published_Applications_New databases; older published applications make up the Published_Applications_Main databases.

Searches run against Nucleic Acid Published Applications produce two sets of results, with the extensions ripbm (Published Applications NA Main) and ripbm (Published Applications NA New). Searches run against Amino Acid Published Applications produce two sets of results, with the extensions rapbm (Published Applications AA Main) and rapbm (Published Applications AA New).

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Publication No. US20050273882A1

GENERAL INFORMATION:

GENERAL INFORMATION:

TITLE OF INVENTION: Improved Expression of Cry3Bb Insecticidal Protein in Plants

FILE REFRENCE: 38-21 (15304) Cry3Bb Improved Exp. Corn

CURRENT APPLICATION NUMBER: US/11/192,801

CURRENT FILING DATE: 2005-07-29

PRIOR APPLICATION NUMBER: US/10/232,665

PRIOR APPLICATION NUMBER: US/10/232,665

PRIOR APPLICATION NUMBER: US/09/377,466

PRIOR FILING DATE: 1999-08-19

NUMBER OF SEQ ID NOS: 43

SEQ ID NOS: 43

Sequence 13, Application US/11192801

Publication No. US20050273882A1

GENERAL INFORMATION:
APPLICANT: Romano. Charles P.
TITLE OF INVENTION: Improved Expression of Cry3Bb Insecticidal Protein in Plants
FILE REFERENCE: 38-21(15304) Cry3Bb Improved Exp. Corn
CURRENT APPLICATION NUMBER: US/11/192,801

CURRENT FILING DATE: 2005-07-29

PRIOR FILING DATE: 2002-08-29

PRIOR FILING DATE: 1999-08-19

NUMBER OF SEQ ID NOS: 43

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                            1 agctctattaattcaagaga........gccgccaccgcggtggagct 7580
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 23,
